Malcolm F Fuller : The Encyclopedia of Farm Animal Nutrition (Cabi) before purchasing it in order to gage whether or not it would be worth my time, and all praised The Encyclopedia of Farm Animal Nutrition (Cabi):

The Encyclopedia of Farm Animal Nutrition deals with the whole of farm animal nutrition, embracing a wide range of disciplines, including physiology, biochemistry, veterinary medicine and feed technology. The encyclopedia contains approximately 2,000 entries from 90 contributors. These entries range from short definitions to more discursive

articles, all entries are fully cross-referenced to aid further research. The encyclopedia covers every type of farm animal found in both developing and developed countries, including cattle, sheep, pigs, chickens, goats, horses, fish, deer, buffalos, rabbits and camelids, as well as ducks, turkeys, ostriches and other birds.

About the Author M. F. Fuller, Rowett Research Institute, Aberdeen.
